

Infusion Services

Part of our ongoing efforts to deliver excellent patient care is offering comprehensive infusion services for patients needing treatment for a variety of medical conditions. Infusion therapy is the delivery of drugs directly into the bloodstream through a vein, usually located in the arm or hand.

At OakLeaf Surgical Hospital, your team of physicians, infusion nurses and clinical pharmacists focus on the continuum of care. Our team will review your medical history and evaluate the medication delivery system to ensure it is customized and safe for you.

Our Infusion Services are designed for your comfort, offering a relaxing setting that places your health and well-being first.

To schedule an appointment
